

MODEL

M-5

CODE

C1277

The first CB radio without any controls.

M-5 is the big news of the Midland CB world.

Finally a radio you can operate with **totally through its multifunction microphone.**

M-5 has a completely innovative frame if compared to standard CB transceivers: the **front panel is without any controls or buttons**; it is only equipped with two plugs: one suitable for the microphone supplied in the package and the USB socket.

All the other operating keys are located on the **multifunction microphone!**

The CB finally becomes easier to use and more immediate, you don't have to operate on its radio body, you only have to grab its microphone and use it! **All functions and settings will be activated through the multifunction microphone:** turning on and off, volume adjustment, channel selection, function setting such as SCAN, squelch and many others.

The functions and settings currently in use will be shown on the **wide microphone display** equipped with a **backlight selectable in 7 different colors.**

M-5 is a **Multistandard** transceiver that includes the main European frequency bands to give you the possibility to communicate almost wherever you go around Europe.

M-5 is a small and compact radio that you can easily place everywhere inside your vehicle – also not in sight, being without any operating keys - and does not need to be installed like the standard CB radios; thanks to its **12V cigarette lighter power cable** it be connected to the vehicle's power supply.

M-5 is equipped with a **sliding mounting bracket** that can be easily removed upon your needs and with **two speakers** – one on the microphone and one on the radio body – with an audio power of 2W each (it is possible to disable the mike speaker).

Despite its extremely reduced size – only 110 x 120 x 25mm – M-5 is a robust and reliable transceiver, thanks to its **aluminium metal chassis** that guarantess sturdiness and durability.

M-5 is also supplied with a **manual and digital squelch** with different sensitivity levels (28 manual and 5 digital), EMG button for the immediate selection of the **emergency channels 9 or 19**, SCAN function, keypad lock to prevent accidental pressure of the controls and many other features.

The front **USB port** makes M-5 also a practical power supply to recharge electronic devices such as smartphones or tablets whenever you need.

COMPLYING TO THE NEW RE-D REGULATION 2014/53/EU
