M-MINI**C1262**

We have the pleasure in introducing the new MIDLAND **multi-media mini CB transceiver, M-MINI**.

M-MINI represents **the state-of-the-art in technology and engineering; it's a compact and discreet radio with an extremely reduced dimension – only 110 x 120 x 25mm -**, specifically designed to be positioned in little spaces inside your vehicle. Being so smallsize, M-MINI does not need to be installed like the standard CB radios, you can just place or put it wherever you want in your car or truck.

Like the most up-to-date transceivers on the market, also M-MINI opens the door to **wireless communications** to finally use the CB remotely! In fact it is

equipped with a **2 PIN Midland socket** that allows the connection to the Bluetooth adaptor WA-CB; then you can choose amongst the Bluetooth earphone/mikes of the WA line (WA21, WA31, WA29, WA-PTT, all supplied with PTT button) or the new Bluetooth microphone WA-MIKE, with which you can get out of your vehicle and communicate up to a distance of 10m or even make and receive phone calls!

M-MINI is a **Multistandard transceiver** that incorporates the main European frequency bands.

The **metal chassis** makes of M-MINI an **extremely robust and sturdy** equipment and with an **elegant design** at the same time.

M-MINI is also supplied with some functions, easily selectable through the buttons in the front panel, such as the **manual or digital (DS) squelch** adjustable in different sensitivity levels (28 and 9 respectively), the **emergency channels 9/19** (EMG) or RF GAIN (RFG).

COMPLYING TO THE NEW EUROPEAN REGULATION 2014/53/EU
