

TRUNK PL

TRUNK PL is a CB antenna holder that can be attached to the vehicle bonnet without drilling through the bodywork.

Its use is intended for any type of mobile radio (typically a CB, but could also be a professional an amateur, or nautical radio)

The TRUNK PL comes with a 6-metre cable with the radio-side connector that you can unscrew for easy installation of the cable through the vehicle. This simple universal antenna mount is perfect for anyone who wants to avoid drilling holes in their vehicle bodywork, but at the same time needs a solid support for their antenna and to enjoy reliable communication on and off the road.

It is not suitable for fibreglass bonnets.

Thanks to the SO239 connector, all antennas equipped with the PL259 connector can be used.

Code: C1616
