Successful training

with the Albrecht Tectalk Training riding set

Make your training effortless! With the new radio solution from Albrecht especially made for riding lessons. The system was built to master every discipline in equestrian sports. See the advantages for yourself:

- Easy to use
- Wireless receiver for maximum freedom of movement
- Secure hold due to neck or various ear hooks
- Small, handy and light weight
- Spares the voice of the coach

The **receiver** is built into the **wireless headset**, which thanks to its light weight, guarantees a high **level of comfort**. For a secure and pleasant wearing, the training set is accompanied by various **silicon ear hooks**. If more hold is required, than you can easily apply an **optinal neck brace** under your helmet.

The training set also comes with benefits for the **coach**: The practical **small clip microphone**, attached to the collar of the jacket or waistcoat, ensures **high speech comprehensibility** - even in loud ambient noises. This means that you can speak at a „normal“ volume, which is easy on the vocal chords and makes teaching more fun. Alternative headsets are also available as an option.

The coach wears the transmitter comfortably with a **belt clip** or uses a **lanyard**. This leaves the **hands free** for important hand gestures and assistance. The training system is not only suitable for the 1:1 situation. Any number of receivers can be connected and even **larger groups or several individuals** can be tutored at the same time. It's impossible for people outside of the group to take part and listen to the conversation.
